1. Executive Summary

This case study evaluates the financial feasibility of a proposed coworking space business in Panaji, Goa using a structured scenario-based Excel model.

The report assesses occupancy, pricing, cost structure, revenue streams, financing assumptions, cash flow behavior, and investment viability over a five-year projection period.

The model uses a 100-seat setup with 80% occupancy selected as the active scenario in the dashboard. The working assumptions include a price per seat of ₹7,500 per month, revenue inflation of 5%, cost escalation of 5%, WACC of 10.5%, corporate tax of 25%, loan interest of 10%, and a 7-year loan tenure.

The analysis shows that the business is highly sensitive to occupancy and fixed costs. At 80% occupancy, the model shows monthly revenue of ₹9,33,000 against monthly cost of ₹11,33,053, leading to a monthly loss of ₹(2,00,053). The break-even occupancy is shown at 161%, which indicates that the selected base case is not operationally feasible at the current price point and cost structure.

The investment appraisal metrics in the report confirm the pressure on project viability in the owned scenario. The appraisal table reports total CAPEX of ₹8,89,50,000, NPV of ₹(11,18,04,258), IRR as loss-making, PI of -0.26, ARR of 7.1%, 5-year cumulative PAT of ₹(3,74,11,457), and 5-year net revenue of ₹5,87,71,719.

Overall, the project demonstrates conditional feasibility only under favorable occupancy conditions, better pricing, tighter cost control, and stronger revenue diversification.

</

Figure 1. Input Sheet and Control Panel

The model is controlled through a single input sheet with assumptions for occupancy, pricing, WACC, tax, loan terms, and benchmark values.

ASSUMPTIONS TABLE				
Variable / Parameter	OWNED Scenario	RENT Scenario	SELECTED VALUE	Notes
A. PROPERTY & SPACE COSTS				
Rent per sq ft (₹/month)	-	₹65	-	0 for owned; avg Panjim rate
Property Purchase Cost (₹/sq ft)	₹15,000	-	₹15,000	Market value Panjim CRE
Security Deposit (months of rent)	-	₹6	-	Typically 6 months in Goa
CAPEX — Interiors (₹/sq ft)	₹1,750	₹1,750	₹1,750	₹1500–₹2000 range; mid-point
CAPEX — Furniture per seat (₹)	₹25,000	₹25,000	₹25,000	₹20k–₹30k; mid-point
CAPEX — IT & Networking (₹ lakh)	₹8	₹8	₹8	Servers, switches, WiFi6
CAPEX — Electrical & AC (₹ lakh)	₹13	₹13	₹13	VRF + DB panels
CAPEX — Branding & Signage (₹ lakh)	₹4	₹4	₹4	Interior + exterior brand
CAPEX — Misc / Contingency (₹ lakh)	₹3	₹3	₹3	5–10% buffer
B. DEPRECIATION & FINANCING				
Depreciation Rate — Fit-out (%)	10.0%	10.0%	10.0%	SLM over 10 years
Depreciation Rate — Furniture (%)	20.0%	20.0%	20.0%	WDV method
Depreciation Rate — IT (%)	33.0%	33.0%	33.0%	3-year life
Loan-to-Cost Ratio (%)	60.0%	60.0%	60.0%	60% debt financing assumed
Cost Escalation Rate	5.0%	5.0%	5.0%	Links to Input!C19 — applied to all OpEx year-on-year
C. STAFFING (MONTHLY SALARIES)				
Centre Manager (1)	₹50,000	₹50,000	₹50,000	Panjim market
Front Desk / Community (2)	₹25,000	₹25,000	₹25,000	Per person
IT Support (1 part-time)	₹15,000	₹15,000	₹15,000	Part-time
Housekeeping & Security (3)	₹14,000	₹14,000	₹14,000	Per person
Marketing / Social (1)	₹20,000	₹20,000	₹20,000	In-house
Accounts / Admin (1)	₹22,000	₹22,000	₹22,000	Part-time
D. UTILITIES & FIXED MONTHLY COSTS				
Internet (leased line, Gbps)	₹18,000	₹18,000	₹18,000	1 Gbps leased line Goa
Electricity — Base (₹/month)	₹45,000	₹45,000	₹45,000	AC + common area
Maintenance & Repairs	₹15,000	₹15,000	₹15,000	Monthly upkeep
Marketing & Digital Ads	₹20,000	₹20,000	₹20,000	Google + Instagram
Admin & Office Expenses	₹8,000	₹8,000	₹8,000	Consumables, printing
Insurance (monthly equiv.)	₹6,000	₹6,000	₹6,000	CRE + asset insurance
Telephone / Misc Utilities	₹3,000	₹3,000	₹3,000	Misc utilities
E. VARIABLE COSTS (PER OCCUPIED SEAT / MONTH)				
Electricity per user (₹/seat)	₹350	₹350	₹350	Usage-based allocation
Pantry / Beverages (₹/seat)	₹200	₹200	₹200	Tea, coffee, snacks
Cleaning per seat (₹/seat)	₹150	₹150	₹150	Incremental cleaning
Internet usage (₹/seat)	₹120	₹120	₹120	Incremental bandwidth
Stationery & consumables	₹80	₹80	₹80	Per active user

Figure 2. Assumptions Table

This sheet documents property, staffing, utilities, variable cost, depreciation, and financing assumptions used in the model.

2. Project Background

The project was developed to evaluate whether a coworking space in Panaji, Goa can become financially viable under realistic operating assumptions.

Coworking businesses are attractive because they combine shared infrastructure, flexible usage, and multiple service lines. At the same time, they carry high fixed operating costs and depend heavily on occupancy stability.

The report frames Panaji as a destination where work-life integration, tourism-linked demand, and seasonal patterns influence the economics of coworking. This makes a simple static feasibility check insufficient.

Instead, the project uses a scenario-based approach to understand how revenue, cost, financing, and

occupancy interact over time and whether the business can create value under the assumptions used in the model.

3. Project Objectives

- Evaluate the financial feasibility of a coworking space project in Panaji, Goa.
- Compare owned-property and leased-property business structures.
- Assess how occupancy levels affect revenue, costs, and profitability.
- Measure the impact of revenue diversification on financial stability.
- Estimate break-even occupancy and the revenue required to cover fixed and variable costs.
- Use capital budgeting tools to assess project attractiveness.
- Identify the conditions under which the business can achieve long-term sustainability.

4. Research Methodology

A descriptive and analytical research design was used in the report.

The model was developed in Microsoft Excel using assumptions and benchmarks documented in the report. The analysis combines primary and secondary inputs, scenario planning, and structured financial modelling.

The key analytical steps include:

- occupancy analysis,
- revenue modelling,
- cost structure modelling,
- profit and loss projection,
- cash flow projection,
- break-even analysis,
- sensitivity analysis,
- investment appraisal using NPV, IRR, PI, and payback logic.

The report also uses comparative analysis between the owned-property and leased-property structures to understand how financing and asset ownership affect project viability.

5. Industry Overview

The report positions the Indian coworking industry in the growth stage of its life cycle.

It states that India's coworking market is estimated at USD 4.53 billion in 2026 and is projected to reach USD 8.7 billion by 2031, with a CAGR of about 13-14%. The report also notes that India already has over 100 million sq ft of flexible space.

The demand drivers mentioned in the report include hybrid work, startup growth, freelancing, remote work, and demand for flexible office space. Goa is presented as a lifestyle-oriented destination that attracts remote workers, freelancers, and digital nomads, although seasonal demand and local cost pressure remain important risks.

6. Business Model Overview

The proposed business model combines flexible workspace, co-living, and workation features.

The model includes several revenue streams: hot desks, dedicated desks, private cabins, meeting rooms, virtual office memberships, events and workshops, and workation packages.

The operating model is built around a 100-seat workspace. The active scenario shown in the dashboard uses 80% occupancy and a price of ₹7,500 per seat per month. The project also includes a hybrid revenue structure that aims to reduce dependency on a single source of income and improve resilience during demand fluctuations.

7. Financial Feasibility Framework

The financial model is structured around the following building blocks:

- capacity planning,
- occupancy scenarios,
- revenue by service line,
- operating and variable costs,
- cash flow projections,
- working capital and financing assumptions,
- break-even analysis,
- sensitivity testing,
- investment appraisal,
- scenario comparison.

The model uses a 5-year revenue trend, a 5-year P&L view, and a dashboard for management review. It is designed to show how changes in occupancy and pricing affect profitability and cash generation.

8. Revenue Analysis

Revenue is generated from workspace subscriptions and complementary services.

The report identifies the following revenue streams: hot desks, dedicated desks, private cabins, meeting rooms, virtual office memberships, events and workshops, and workation packages.

At 80% occupancy, the occupancy scenario matrix shows total monthly revenue of ₹9,33,000. The annual revenue trend for the active scenario rises from ₹1,11,96,000 in Year 1 to ₹1,36,08,808 in Year 5. The 5-year revenue total for the active scenario is ₹6,18,64,967.

This section of the analysis shows that pricing, occupancy, and service mix are the primary drivers of revenue growth.

SECTION A — CAPACITY SUMMARY				
Parameter	Value	Unit		
es "Net Revenue" Point "Year 2"	100	seats		
je: ₹1,11,68,010	5,000	sq ft		
Area per Seat	50	sq ft		
Current Occupancy Setting	80.0%	%		
Currently Occupied Seats	80	seats		
Currently Unoccupied Seats	20	seats		
Revenue per Occupied Seat/mo	₹11,663	₹/seat		
Cost per Occupied Seat/mo	₹14,163	₹/seat		

SECTION B — OCCUPANCY SCENARIO MATRIX				
Metric	40% Occupancy	60% Occupancy	80% Occupancy	Active Scenario
Occupied Seats	40	60	80	80
Unoccupied Seats	60	40	20	20
Utilisation Rate	40.0%	60.0%	80.0%	80.0%
Hot Desk Monthly Revenue	₹1,35,000	₹2,02,500	₹2,70,000	₹2,70,000
Dedicated Desk Monthly Revenue	₹1,03,500	₹1,55,250	₹2,07,000	₹2,07,000
Private Cabin Monthly Revenue	₹84,000	₹1,26,000	₹1,68,000	₹1,68,000
Other Revenue (Mtg Rooms + VO + Events + Workation)	₹2,88,000	₹2,88,000	₹2,88,000	₹2,88,000
TOTAL MONTHLY REVENUE	₹6,10,500	₹7,71,750	₹9,33,000	₹9,33,000
Total Variable Cost	₹36,000	₹54,000	₹72,000	₹72,000
Total Fixed Cost	₹10,61,053	₹10,61,053	₹10,61,053	₹10,61,053
TOTAL MONTHLY COST	₹10,97,053	₹11,15,053	₹11,33,053	₹11,33,053
Monthly Profit / (Loss)	(₹4,86,553)	(₹3,43,303)	(₹2,00,053)	(₹2,00,053)
Operating Margin %	-79.7%	-44.5%	-21.4%	-21.4%
Break-even Contribution (Revenue - Variable Cost)	₹5,74,500	₹7,17,750	₹8,61,000	₹8,61,000

Figure 3. Occupancy Scenario Matrix

The matrix compares 40%, 60%, and 80% occupancy outcomes and shows the active 80% scenario used in the dashboard.

PART 1 — ANNUAL REVENUE BY STREAM (₹)						
Revenue Stream	Year 1	Year 2	Year 3	Year 4	Year 5	5-Year Total
Hot Desks	₹32,40,000	₹34,02,000	₹35,72,100	₹37,50,705	₹39,38,240	₹1,79,03,045
Dedicated Desks	₹24,84,000	₹26,08,200	₹27,38,610	₹28,75,541	₹30,19,318	₹1,37,25,668
Private Cabins	₹20,16,000	₹21,16,800	₹22,22,640	₹23,33,772	₹24,50,461	₹1,11,39,673
Meeting Rooms	₹8,64,000	₹9,07,200	₹9,52,560	₹10,00,188	₹10,50,197	₹47,74,145
Virtual Office Memberships	₹7,20,000	₹7,56,000	₹7,93,800	₹8,33,490	₹8,75,165	₹39,78,455
Events & Workshops	₹7,20,000	₹7,56,000	₹7,93,800	₹8,33,490	₹8,75,165	₹39,78,455
Workation Packages	₹11,52,000	₹12,09,600	₹12,70,080	₹13,33,584	₹14,00,263	₹63,65,527
TOTAL ANNUAL REVENUE	₹1,11,96,000	₹1,17,55,800	₹1,23,43,590	₹1,29,60,770	₹1,36,08,808	₹6,18,64,967
Revenue Growth YoY %	-	5.0%	5.0%	5.0%	5.0%	-

Figure 4. Annual Revenue by Stream

This table shows how each service line contributes to total revenue over the five-year period.

9. Cost Analysis

The report emphasizes that the business has a relatively high fixed-cost base.

Under the base-case assumptions, annual fixed operating expenses are approximately ₹1.27 crore in Year 1, excluding depreciation and financing costs. Variable costs are estimated at ₹900 per occupied seat per month and rise in proportion to occupancy.

The assumptions table also lists detailed cost inputs: centre manager salary of ₹50,000, front desk/community salaries of ₹25,000 each, IT support of ₹15,000, housekeeping and security of ₹14,000 each, marketing and social salary of ₹20,000, and accounts/admin salary of ₹22,000. Monthly fixed expenses include internet at ₹18,000, electricity at ₹45,000, maintenance at ₹15,000, marketing and digital ads at ₹20,000, admin and office expenses at ₹8,000, insurance at ₹6,000, and telephone/misc utilities at ₹3,000.

The model also uses per-occupied-seat variable costs for electricity, pantry, cleaning, internet usage, and stationery. These inputs show that cost control and occupancy discipline are essential to the project's financial sustainability.

SECTION C — 5-YEAR ANNUAL REVENUE TREND (WITH INFLATION)				
Year	40% Occupancy (₹)	60% Occupancy (₹)	80% Occupancy (₹)	Active Scenario (₹)
Year 1	₹73,26,000	₹92,61,000	₹1,11,96,000	₹1,11,96,000
Year 2	₹76,92,300	₹97,24,050	₹1,17,55,800	₹1,17,55,800
Year 3	₹80,76,915	₹1,02,10,253	₹1,23,43,590	₹1,23,43,590
Year 4	₹84,80,761	₹1,07,20,765	₹1,29,60,770	₹1,29,60,770
Year 5	₹89,04,799	₹1,12,56,803	₹1,36,08,808	₹1,36,08,808

SECTION D — REVENUE & COST PER SEAT ANALYSIS			
KPI	Value	Unit	Comment
Revenue per Installed Seat / month	₹9,330	₹/seat	Based on current occupancy
Revenue per Occupied Seat / month	₹11,663	₹/seat	Active members only
Cost per Occupied Seat / month	₹14,163	₹/seat	Full cost allocation
Variable Cost per Seat / month	₹900	₹/seat	From Cost sheet Part C
Contribution per Seat / month	₹10,763	₹/seat	Revenue/seat minus variable cost
Break-even Price per Seat	₹14,163	₹/seat	Price to cover ALL fixed + variable costs
Break-even Seats Required	161	seats	Fixed Cost ÷ (Price/seat – Variable cost/seat)
Break-even Occupancy %	161.0%	%	Break-even seats ÷ total seats (>100% = unachievable at current price)

Figure 5. Revenue, Cost, and Break-even KPI Table

This table links revenue per seat, cost per seat, contribution margin, and the break-even occupancy requirement.

10. Profitability Analysis

Profitability is assessed through projected P&L performance over five years and through the dashboard KPIs.

At 80% occupancy, the model reports monthly cost of ₹11,33,053 against monthly revenue of ₹9,33,000, producing a monthly loss of ₹(2,00,053).

The dashboard also shows gross revenue of ₹11,96,000, EBITDA of ₹(29,60,439), PAT of ₹(99,19,939), and gross margin of 91.9% in the selected base view.

The report concludes that profitability improves when occupancy rises, but the current pricing and cost structure do not generate positive operating returns under the selected base case. The owned-property structure adds further pressure on profitability because of the high initial capital burden.

Figure 6. Dashboard Overview

The dashboard presents the active scenario, key KPIs, break-even occupancy, profitability metrics, and revenue/cost visuals.

11. Cash Flow Analysis

The cash flow analysis in the report evaluates liquidity over the five-year projection period. The report states that cash flows are affected by workspace revenue, operating expenses, capital expenditure, and financing obligations. The net cash flow trend chart shows an initial outflow due to CAPEX and continued negative cash flow in the projection years under the selected base case. The dashboard view shows 5-year cumulative PAT of ₹(3,74,11,457) and 5-year net revenue of ₹5,87,71,719. The trend indicates that liquidity pressure remains significant unless occupancy, pricing, and cost structure improve materially.

Figure 7. Net Cash Flow Trend

The chart shows the initial capital outflow and the negative cash flow pattern across the five-year horizon.

12. Break-Even Analysis

Break-even analysis is used to identify the occupancy level needed to cover all fixed and variable costs. The report shows a break-even price per seat of ₹14,163, break-even seats required of 161, and break-even occupancy of 161.0%. Since the workspace only has 100 seats, this indicates that the current base-case model cannot reach break-even at the selected price and cost structure. The report therefore treats occupancy management and pricing power as the most important levers for improving feasibility.

A. MONTHLY EBITDA- OCCUPANCY % vs PRICE PER SEAT									
Occ% Price	Chart Area	₹5,000	₹6,000	₹7,500	₹9,000	₹10,000	₹12,000	₹15,000	₹20,000
20%		(₹6,83,553)	(₹6,62,053)	(₹6,29,803)	(₹5,97,553)	(₹5,76,053)	(₹5,33,053)	(₹4,68,553)	(₹3,61,053)
30%		(₹6,36,303)	(₹6,03,553)	(₹5,54,428)	(₹5,05,303)	(₹4,72,553)	(₹4,07,053)	(₹3,08,803)	(₹1,45,053)
40%		(₹5,94,053)	(₹5,51,053)	(₹4,86,553)	(₹4,22,053)	(₹3,79,053)	(₹2,93,053)	(₹1,64,053)	₹50,947
50%		(₹5,46,803)	(₹4,92,553)	(₹4,11,178)	(₹3,29,803)	(₹2,75,553)	(₹1,67,053)	(₹4,303)	₹2,66,947
60%		(₹5,04,553)	(₹4,40,053)	(₹3,43,303)	(₹2,46,553)	(₹1,82,053)	(₹53,053)	₹1,40,447	₹4,62,947
70%		(₹4,57,303)	(₹3,81,553)	(₹2,67,928)	(₹1,54,303)	(₹78,553)	₹72,947	₹3,00,197	₹6,78,947
80%		(₹4,15,053)	(₹3,29,053)	(₹2,00,053)	(₹71,053)	₹14,947	₹1,86,947	₹4,44,947	₹8,74,947
90%		(₹3,67,803)	(₹2,70,553)	(₹1,24,678)	₹21,197	₹1,18,447	₹3,12,947	₹6,04,697	₹10,90,947
100%		(₹3,25,553)	(₹2,18,053)	(₹56,803)	₹1,04,447	₹2,11,947	₹4,26,947	₹7,49,447	₹12,86,947

Figure 8. Occupancy vs Price Sensitivity Table

The heatmap shows how monthly EBITDA changes across different combinations of occupancy and seat pricing.

13. Sensitivity Analysis

The sensitivity analysis evaluates how changes in occupancy and price affect monthly EBITDA and project feasibility.

The report's sensitivity table shows that higher occupancy and higher seat pricing improve performance, while lower occupancy levels create substantial losses. In the active scenario, even a price range from ₹5,000 to ₹20,000 is tested against occupancy levels from 20% to 100%.

The findings show that occupancy is the most sensitive variable, while pricing and cost changes also influence the outcome. This means that the business needs stable demand and disciplined cost control to remain feasible.

14. Investment Appraisal

The investment appraisal section uses NPV, IRR, Profitability Index, Payback Period logic, and WACC to assess project attractiveness.

The appraisal table in the report shows:

- Total CAPEX: ₹8,89,50,000
- NPV: ₹(11,18,04,258)
- IRR: Loss-making
- WACC: 10.50%
- Profitability Index: -0.26
- ARR: 7.1%
- 5-year cumulative PAT: ₹(3,74,11,457)
- 5-year net revenue: ₹5,87,71,719

These results indicate that the base-case owned scenario does not create positive value under the selected assumptions.

C. APPRAISAL METRICS	
Metric	Value
Total CAPEX (Investment)	₹8,89,50,000
NPV (Net Present Value)	(₹11,18,04,258)
IRR (Internal Rate of Return)	Loss-making
WACC (Discount / Hurdle Rate)	10.50%
Profitability Index (PI)	-0.26
ARR (Accounting Rate of Return)	(7.1%)
5-Yr Cumulative PAT	(₹3,74,11,457)
5-Yr Net Revenue	₹5,87,71,719

Figure 9. Investment Appraisal Metrics

This table summarizes total CAPEX, NPV, IRR, WACC, PI, ARR, and five-year cumulative results.

15. Scenario Analysis

The report compares owned-property and leased-property structures.

Owned-property scenario:

- Total CAPEX: ₹8,89,50,000
- Property purchase: ₹7,50,00,000
- Fit-out and furniture: ₹1,12,50,000
- IT, electrical, branding, and misc.: ₹27,00,000
- Equity required (40%): ₹3,55,80,000
- Loan required (60%): ₹5,33,70,000

Leased-property scenario:

- Total CAPEX: ₹1,59,00,000
- Security deposit: ₹19,50,000
- Equity required (40%): ₹63,60,000
- Loan required (60%): ₹95,40,000

The comparison shows that the owned structure requires much higher capital and financing, while the leased structure reduces upfront investment and improves short-term flexibility.

SCENARIO COMPARISON				
Metric	OWNED Scenario	RENT Scenario	Variance (Rent-Owned)	% Difference
CAPEX				
Total CAPEX	₹8,89,50,000	₹1,59,00,000	(₹7,30,50,000)	(82.1%)
Property Purchase	₹7,50,00,000	-	(₹7,50,00,000)	(100.0%)
Fit-out & Furniture	₹1,12,50,000	₹1,12,50,000	-	-
IT+Electrical+Brand+Misc	₹27,00,000	₹27,00,000	-	-
Security Deposit	-	₹19,50,000	₹19,50,000	-
Equity Required (40%)	₹3,55,80,000	₹63,60,000	(₹2,92,20,000)	(82.1%)
Loan Required (60%)	₹5,33,70,000	₹95,40,000	(₹4,38,30,000)	(82.1%)

Figure 10. Owned vs Rent Scenario Comparison

The table compares CAPEX, equity requirement, and loan requirement across owned and rented business structures.

16. Key Findings

- Occupancy level is the most important driver of financial sustainability.
- Revenue diversification improves stability but does not offset weak occupancy by itself.
- The business has a high fixed-cost structure that places pressure on margins.
- The base-case owned scenario is not feasible at the current price and occupancy levels.
- The leased structure lowers initial investment but still depends on occupancy discipline.
- Break-even occupancy at 161% indicates the need for either stronger pricing, lower costs, or a different operating structure.

17. Skills Demonstrated

This project demonstrates:

- Financial modelling
- Budgeting and forecasting
- Financial planning and analysis
- Investment appraisal
- Sensitivity analysis
- Scenario planning
- Business analysis
- Dashboard development
- Strategic decision making
- Excel-based management reporting

18. Conclusion

The report shows that a coworking space in Panaji, Goa can be evaluated effectively through a structured financial model.

The analysis confirms that occupancy, pricing, and fixed cost management are the critical determinants of feasibility. The dashboard and appraisal metrics suggest that the current base-case owned scenario is financially weak, while the leased structure offers lower entry cost but still depends on operational discipline.

Overall, the project is a strong finance portfolio case study because it combines scenario analysis, revenue modelling, cost planning, break-even testing, sensitivity analysis, and investment appraisal in one Excel-based framework.
